Members of the Association of Professional Reserve Analysts / Reserve Specialist designation from CAI

**Starwood Association Maintenance** Plan **Reserve Study–Onsite Disclosure Information** 2020

We have conducted an onsite reserve study and maintenance plan for Starwood Association for the year beginning January 1, 2020, in accordance with guidelines established by Community Associations Institute and the American Institute of Certified Public Accountants.

This reserve study and maintenance plan are in compliance with the legislative changes made in 2007 to ORS Chapters 94 and 100.

In addition to providing the reserve study and maintenance plan, we also provide tax and review/audit services to the Association.

Assumptions used for inflation, interest, and other factors are detailed in page 17. Income tax factors were not considered due to the uncertainty of factors affecting net taxable income and the election of tax form to be filed.

David T. Schwindt, the representative in charge of this report, is a designated Reserve Study Specialist, Professional Reserve Analyst, and Certified Public Accountant licensed in the states of Oregon, Washington, California, and Arizona.

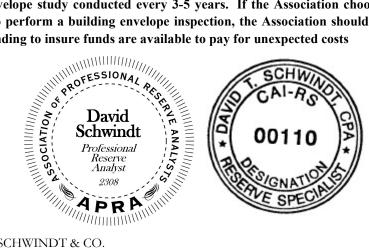

#### **Increases in Roofing and Painting Costs.**

Over the last several years, roofing, painting and other costs have increased at a dramatic pace. Schwindt & Company has noted this in our reserve studies. We were not sure if this was a temporary price increase or the new normal in pricing. We are now of the opinion that these increased prices will most likely continue. Roofing costs have nearly doubled and painting costs have increased 50%. It is still possible to keep the increases to a minimum if Associations can find a vendor that will perform the work at a reduced price, however, these vendors are becoming rare.

The main reason for increased prices aside from normal cost increases appear to be the availability of labor. Many workers left the industry during the downturn and have not reentered the job market thus driving up wage costs to attract qualified workers. Roofers and painters are also seeing increased demand for their services due to aging association property. These factors have created the perfect storm for increased prices.

These increases are being built in to cost estimates and required contributions. Associations will see an increase in the suggested reserve contributions beginning with the 2018/2019 budget years and depending on the year the roofing and painting projects occur, the increases may be substantial.

Associations should have a complete building envelope study conducted every 3-5 years. If the Association chooses not to engage a qualified engineer or architect to perform a building envelope inspection, the Association should be 100% funded using the fully funded method of funding to insure funds are available to pay for unexpected costs

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 5 of 73

#### Revised 8/24/2020 According to Article 10.1 of the Bylaws, All maintenance, repairs and replacements to the common areas shall be made by the Association and shall be charged to all of the members as a common expense.

All information regarding the useful life and cost of reserve components was derived from the Association, local venders, and/or from various construction pricing and scheduling manuals.

The terms *RS Means*, *National Construction Estimator*, and *Fannie Mae Expected Useful Life Tables and Forms* refer to construction industry estimating databases that are used throughout the industry to establish cost estimates and useful life estimates for common building components and products. We suggest that the Association obtain firm bids for these services.

An insurance deductible is not included in the reserve study.

We are not aware of any material issues which, if not disclosed, would cause a material distortion of this report.

Certain information, such as the beginning balance of reserve funds and other information as detailed on the component detail reports, was provided by Association representatives and is deemed to be reliable by us. This reserve study is a reflection of the information provided to us and cannot be used for the purpose of performing an audit, a quality/forensic analysis, or background checks of historical records.

Site visits should not be considered a project audit or quality inspection of the Association's property. This site visit does not evaluate the condition of the property to determine the useful life or needed repairs. Schwindt & Company suggests that the Association perform a building envelope inspection to determine the condition, performance, and the useful life of all the components.

Certain costs outlined in the reserve study are subjective and, as a result, are for planning purposes only. The Association should obtain firm bids at the time of work. Actual costs will depend upon the scope of work as defined at the time the repair, replacement, or restoration is performed. All estimates relating to future work are good faith estimates and projections are based on the estimated inflation rate, which may or may not prove accurate. All future costs and life expectancies should be reviewed and adjusted annually.

This reserve study, unless specifically stated in the report, assumes no fungi, mold, asbestos, lead paint, urea-formaldehyde foam insulation, termite control substances, other chemicals, toxic wastes, radon gas, electro-magnetic radiation or other potentially hazardous materials (on the surface or sub-surface), or termites on the property. The existence of any of these substances may adversely affect the accuracy of this reserve study. Schwindt & Company assumes no responsibility regarding such conditions, as we are not qualified to detect substances, determine the impact, or develop remediation plans/costs.

Since destructive testing was not performed, this reserve study does not attempt to address latent and/or patent defects. Neither does it address useful life expectancies that are abnormally short due either to improper design, installation, nor to subsequent improper maintenance. This reserve study assumes all components will be reasonably maintained for the remainder of their life expectancy.

#### Physical Analysis:

New projects generally include information provided by developers and/or refer to drawings.

Full onsite reserve studies generally include field measurements and do not include destructive testing. Drawings are usually not available for existing projects.

Onsite updates generally include observations of physical characteristics, but do not include field measurements.

This reserve study should be reviewed carefully. It may not include all common and limited common element components that will require major maintenance, repair, or replacement in future years, and may not include regular contributions to a reserve account for the cost of such maintenance, repair, or replacement. The failure to include a component in a reserve study, or to provide contributions to a reserve account for a component, may, under some circumstances, require the association to (1) defer major maintenance, repair, or replacement, (2) increase future reserve contributions, (3) borrow funds to pay for major maintenance, repair, or replacement, or (4) impose special assessments for the cost of major maintenance, repair, or replacement.

# **STARWOOD ASSOCIATION**

# **MAINTENANCE PLAN**

2020

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 7 of 73

#### Starwood Association Executive Summary of Maintenance Plan

Regular maintenance of common elements is necessary to insure the maximum useful life and optimum performance of components. Of particular concern are items that may present a safety hazard to residents or guests if they are not maintained in a timely manner and components that perform a water-proofing function.

This maintenance plan is a cyclical plan that calls for maintenance at regular intervals. The frequency of the maintenance activity and the cost of the activity at the first instance follow a short descriptive narrative. This maintenance plan should be reviewed on an annual basis when preparing the annual operating budget for the Association.

Checklists, developed by Reed Construction Data, Inc., can be photocopied or accessed from the RS Means website:

#### http://www.rsmeans.com/supplement/67346.asp

They can be used to assess and document the existing condition of an Association's common elements and to track the carrying out of planned maintenance activities.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 8 of 73

#### Starwood Association Maintenance Plan 2020

Pursuant to Oregon State Statutes Chapters 94 and 100, which require a maintenance plan as an integral part of the reserve study, the maintenance procedures are as follows:

The Board of Directors should refer to this maintenance plan each year when preparing the annual operating budget for the Association to ensure that annual maintenance costs are included in the budget for the years that they are scheduled.

#### **Property Inspection**

Schwindt & Company recommends that a provision for the annual inspection of common area components be included in the maintenance plan for all associations. This valuable management tool will help to ensure that all components achieve a maximum useful life expectancy and that they function as intended throughout their lifespan.

The inspection should be performed by a qualified professional and should include a written summary of conclusions with specific recommendations for any needed repairs or maintenance.

We suggest that the Association obtain firm bids for this service.

This expense should be included in the annual operating budget for the Association.

Frequency: Annually

#### **Lighting: Exterior Common Area – Inspection/Maintenance**

#### Note: Replacement of flickering or burned-out bulbs or lamps should be immediate.

Lighting is a crucial element in the provision of safety and security. All lighting systems should be inspected frequently and care must be taken to identify and correct deficiencies.

Various fixture and lamp types may be used according to area needs. Lighting systems should be designed to provide maximum, appropriate illumination at minimal energy expenditures. Lighting maintenance processes should include a general awareness of factors that cause malfunctions in lighting systems, such as dirt accumulation and lumen depreciation. It is important to fully wash, rather than drywipe, exterior surfaces to reclaim light and prevent further deterioration.

Deficiencies, required maintenance, and required repairs after completion of the review should be noted by the maintenance contractor and/or association representatives.

Repairs and inspections should be completed by a qualified professional.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 9 of 73 Revised 8/24/2020 This expense should be included in the annual operating budget for the Association as general property maintenance expense.

Frequency: Bi-Weekly

#### **Common Play Area – Review**

As play areas, surfaces, and equipment vary widely, a general safety and maintenance protocol will be included in the maintenance plan. Management should work with their insurance company to identify additional specific recommendations and should consult manufacturer's specifications. Note deficiencies and required maintenance and repairs after completion of the review.

Generally, in order to maintain a safe playing area, the following should be reviewed: signage visibility and currency; accessible safety/first aid equipment location; fence condition for protruding or loose parts, holes or inoperable gates; and overall condition of grounds for deficiencies such as vandalism, debris buildup, trash, or tripping hazards.

Concrete play surfaces should be reviewed for deficiencies such as tripping hazards, alkali-aggregate expansions, honeycombing, spalling, chipping, cracks, stains, lifts, slippery areas, and/or unevenness.

Grass play areas should be reviewed for deficiencies: such as overgrowth; exposed soil; excess fertilization (granules left on surface); contamination from foreign substances; rodent infestation (e.g., gopher holes); root encroachment; depressions or other tripping hazards, such as rocks, elevated sprinkler heads, hoses, field markers, and/or exposed irrigation pipes.

This expense should be included in the annual operating budget for the Association as general property maintenance expense.

#### Frequency: Monthly

#### **Property Entrance - Review**

The property entrance is a significant reflection on the development as a whole and is often the first stop in the development for residents, prospective residents or buyers, and visitors. The area should be consistently clean, functional, and accessible. In addition to serving as a point of initial access, the main entry may feature mailboxes, which should be secure and operational.

**Mailboxes**: Review overall condition and function of locks; proper lubrication of working parts; cleanliness of face plates; security of housing, in compliance with current postal regulations; accuracy and visibility of signage/accessibility of tactile lettering, where required; condition and function of slots and depositories for outgoing mail and packages.

Deficiencies, required maintenance, and required repairs after completion of the review should be noted by the maintenance contractor and/or association representatives.

This expense should be included in the annual operating budget for the Association as general property maintenance expense.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 10 of 73

#### Frequency: Monthly

#### **Fence–Perimeter–Inspection**

The fence located along the perimeter of the property should be checked semi-annually for overall integrity and safety. The overall condition of the fence should be checked for deficiencies such as vegetation encroachment, debris buildup, , sagging areas, missing segments, and/or vandalism.

Deficiencies, required maintenance, and required repairs after completion of the review should be noted by the maintenance contractor and/or association representatives.

Frequency: Semiannually

#### **Trees - Maintenance**

The Association will be responsible for trimming trees in the common area throughout the property. Trees and shrubs should be kept clear of the building components.

We suggest that the Association obtain firm bids for this service.

This expense should be included in the Association's operating budget.

Frequency: Annually

#### Landscape Maintenance

The Association will be responsible for maintenance and upkeep of common area landscape throughout the property. This may include mowing lawn, removal of weeds, and dead-heading of flowers. Landscape techniques vary depending on the foliage and season.

We suggest that the Association obtain firm bids for this service.

This expense should be included in the Association's operating budget.

Frequency: Annually

#### Lawn Irrigation System

Periodic maintenance to the lawn irrigation system should be anticipated with this type of component. These maintenance procedures will include replacement of the control mechanism, replacement of damaged piping, upgrading of sprinkler heads and valve components, and any other work that is advised by repair professionals.

In recent years, improvements have been made to this type of system which has increased the efficiency of the water distribution process. Such improvements can be expected to continue to be made and the owners of such systems are well advised to plan on periodic upgrades to maintain the efficiency of their systems.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 11 of 73 Lawn irrigation systems also require periodic testing to ensure proper operation. Sometimes this testing is mandated by ordinance or building codes. All work on lawn irrigation systems must be performed by licensed contractors who specialize in this type of work.

This expense should be included in the annual operating budget for the Association.

Frequency: Annually

#### **Asphalt – Seal Coating**

Maintenance of asphalt paving includes the periodic application of an asphalt emulsion sealer or "seal coat". This procedure is typically performed every 4 to 7 years, depending on a variety of factors that can affect the useful life of the sealer.

Vehicle traffic is one such factor, and associations that have asphalt paving that carries considerable vehicle traffic should consider a maintenance program that calls for seal coating of asphalt driving surfaces as frequently as every 4 years.

This maintenance procedure involves thoroughly cleaning all pavements, filling of any surface cracks and patching of any locally damaged pavement surfaces. The emulsion sealer is then applied.

This work should be performed by a licensed paving contractor.

This expense is included in the reserve study for the Association.

Frequency: Every 7 years

This maintenance plan is designed to preserve and extend the useful life of assets and is dependent upon proper inspection and follow up procedures

#### Starwood Association Property Description

Starwood Association consists of 178 single family home located in Bend, Oregon.). The Association shall provide improvements upon the common elements include the roads, irrigation system, and park. The individual homeowners are responsible for all maintenance and repairs of their home and the adjacent private property.

This study uses information supplied by the developer, and various construction pricing and scheduling manuals to determine useful lives and replacement costs. The property is currently under construction.

A site visit was performed by Schwindt & Company in 2020. Schwindt & Co did not investigate components for defects, materials, design or workmanship. This would ordinarily be considered in a complete building envelope inspection. Our condition assessment considers if the component is wearing as intended. All components are considered to be in fair condition and appear to be wearing as intended unless noted otherwise in the component detail.

Funds are being accumulated in the replacement fund based on estimates of future need for repairs and replacement of common property components. Actual expenditures, investment income, and provisions for income taxes however, may vary from estimated amounts, and variations may be material. Therefore, amounts accumulated in the replacement fund may not be adequate to meet future funding needs.

If additional funds are needed, the Association has the right, subject to member approval, to increase regular assessments, levy special assessments, otherwise the Association may delay repairs or replacements until funds are available.

### Threshold Funding Fully Reserved Model Summary

- This study utilizes the cash flow method and the threshold funding model, which establishes a reserve funding goal that keeps the reserve balance above a specified dollar or percent funded amount. The threshold method assumes that the threshold method is funded with a positive threshold balance, therefore, "fully reserved".
- The following items were not included in the analysis because they have useful lives greater than 30 years: grading/drainage; foundation/footings; storm drains; telephone, cable, and internet lines.
- This funding scenario begins with a contribution of \$31,000 in 2020 and increases 9.00% each year for the remaining years of the study. A minimum balance of \$61,883 is maintained.
- The purpose of this study is to insure that adequate replacement funds are available when components reach the end of their useful life. Components will be replaced as required, not necessarily in their expected replacement year. This analysis should be updated annually.

### Baseline Funding Fully Reserved Model Summary

- This study utilizes the cash flow method and the threshold funding model, which establishes a reserve funding goal that keeps the reserve balance above 0 dollars. This scenario represents the minimum funding requirement.
- The following items were not included in the analysis because they have useful lives greater than 30 years: grading/drainage; foundation/footings; storm drains; telephone, cable, and internet lines.
- This funding scenario begins with a contribution of \$3,500 in 2020 and increases 2.50% each year for the remaining years of the study. A minimum balance of \$13,330 is maintained.
- The purpose of this study is to insure that adequate replacement funds are available when components reach the end of their useful life. Components will be replaced as required, not necessarily in their expected replacement year. This analysis should be updated annually.

Many Associations include the insurance deductible in the reserve study as a component. Generally this amount is \$10,000 but can vary based on insurance coverages.

The insurance deductible component is only included as an expenditure in the first year of the study. This expenditure is not listed again during the 30 year cash flow projection. Boards have asked if the inclusion of an insurance deductible in the study as a component can increase the suggested annual reserve contribution. As long as the Association has a threshold amount of greater than \$10,000 in the reserve study as a contingency in the first year of the study, the inclusion of the insurance deductible should not affect the suggested reserve contribution. In other words, if the cash flow projection shows an amount greater than \$10,000 as a contingency balance in the reserve cash flow model without the insurance deductible, the inclusion of the insurance component should not affect the suggested reserve contribution.

\$10,000

**Contingency - Total Current Cost** 

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 69 of 73

# Additional Disclosures

#### Levels of Service

The following three categories describe the various types of Reserve Studies from exhaustive to minimal.

I. Full: A Reserve Study in which the following five Reserve Study tasks are performed:

- Component Inventory
- Condition Assessment (based upon on-site visual observations)
- Life and Valuation Estimates
- Fund Status
- Funding Plan

**II. Update, With Site Visit/On-Site Review:** A Reserve Study update in which the following five Reserve Study tasks are performed:

- Component Inventory (verification only, not quantification)
- Condition Assessment (based on on-site visual observations)
- Life and Valuation Estimates
- Fund Status
- Funding Plan

**III. Update, No Site Visit/Off Site Review:** A Reserve Study update with no on-site visual observations in which the following three Reserve Study tasks are performed:

- Life and Valuation Estimates
- Fund Status
- Funding Plan
- **IV. Preliminary, Community Not Yet Constructed**. A reserve study prepared before construction that is generally used for budget estimates. It is based on design documents such as the architectural and engineering plans. The following three tasks are performed to prepare this type of study:
  - Component inventory
  - Life and valuation estimates
  - Funding Plan

#### Terms and Definitions

CAPITAL IMPROVEMENTS: Additions to the association's common elements that previously did not exist. While these components should be added to the reserve study for future replacement, the cost of construction should not be taken from the reserve fund.

CASH FLOW METHOD: A method of developing a reserve *Funding Plan* where contributions to the reserve fund are designed to offset the variable annual expenditures from the reserve fund. Different reserve *Funding Plans* are tested against the anticipated schedule of reserve expenses until the desired *Funding Goal* is achieved.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 70 of 73 Revised 8/24/2020 COMPONENT: The individual line items in the *Reserve Study* developed or updated in the *Physical Analysis*. These elements form the building blocks for the *Reserve Study*. *Components* typically are: 1) association responsibility; 2) with limited *Useful Life* expectancies; 3) predictable *Remaining Useful Life* expectancies; 4) above a minimum threshold cost; and 5) as required by local codes.

COMPONENT INVENTORY: The task of selecting and quantifying reserve *Components*. This task can be accomplished through on-site visual observations, review of association design and organizational documents, a review of established association precedents, and discussion with appropriate association representative(s) of the Association or cooperative.

COMPONENT METHOD: A method of developing a reserve *Funding Plan* where the total contribution is based on the sum of contributions for individual *Components*. See *Cash Flow Method*.

CONDITION ASSESSMENT: The task of evaluating the current condition of the *Component* based on observed or reported characteristics.

CURRENT REPLACEMENT COST: See Replacement Cost.

DEFICIT: An actual or projected *Reserve Balance* that is less than the *Fully Funded Balance*. The opposite would be a *Surplus*.

EFFECTIVE AGE: The difference between *Useful Life* and *Remaining Useful Life*. Not always equivalent to chronological age since some *Components* age irregularly. Used primarily in computations.

FINANCIAL ANALYSIS: The portion of a *Reserve Study* where current status of the reserves (measured as cash or *Percent Funded*) and a recommended reserve contribution rate (reserve *Funding Plan*) are derived, and the projected reserve income and expense over time is presented. The *Financial Analysis* is one of the two parts of a *Reserve Study*.

FULLY FUNDED: 100% Funded. When the actual or projected *Reserve Balance* is equal to the *Fully Funded Balance*.

FULLY FUNDED BALANCE (FFB): Total accrued depreciation, an indicator against which actual or projected *Reserve Balance* can be compared. The *Reserve Balance* that is in direct proportion to the fraction of life "used up" of the current repair or *Replacement Cost*. This number is calculated for each *Component*, then added together for an association total. Two formulas can be utilized, depending on the provider's sensitivity to interest and inflation effects. Note: Both yield identical results when interest and inflation are equivalent.

FFB = Current Cost X Effective Age / Useful Life or FFB = (Current Cost X Effective Age / Useful Life) + [(Current Cost X Effective Age / Useful Life) / (1 + Interest Rate) ^ Remaining Life] - [(Current Cost X Effective Age / Useful Life) / (1 + Inflation Rate) ^ Remaining Life]

> SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 71 of 73

FUND STATUS: The status of the reserve fund as compared to an established benchmark such as percent funding. The Association appears to be adequately funded as the threshold method.

FUNDING GOALS: Independent of methodology utilized, the following represent the basic categories of *Funding Plan* goals:

Baseline Funding: Establishing a reserve funding goal of keeping the reserve cash balance above zero.

■ Full Funding: Setting a reserve funding goal of attaining and maintaining reserves at or near 100% funded.

■ Statutory Funding: Establishing a reserve funding goal of setting aside the specific minimum amount of reserves required by local statues.

■ Threshold Funding: Establishing a reserve funding goal of keeping the *Reserve Balance* above a specified dollar or *Percent Funded* amount. Depending on the threshold, this may be more or less conservative than fully funding.

FUNDING PLAN: An association's plan to provide income to a reserve fund to offset anticipated expenditures from that fund.

#### FUNDING PRINCIPLES:

- Sufficient Funds When Required
- Stable Contribution Rate over the Years
- Evenly Distributed Contributions over the Years
- Fiscally Responsible

LIFE AND VALUATION ESTIMATES: The task of estimating *Useful Life*, *Remaining Useful Life*, and repair or *Replacement Costs* for the reserve *Components*.

PERCENT FUNDED: The ratio at a particular point of time (typically the beginning of the Fiscal Year) of the actual or projected *Reserve Balance* to the *Fully Funded Balance*, expressed as a percentage.

PHYSICAL ANALYSIS: The portion of the *Reserve Study* where the *Component Inventory*, *Condition Assessment*, and *Life and Valuation Estimate* tasks are performed. This represents one of the two parts of the *Reserve Study*.

REMAINING USEFUL LIFE (RUL): Also referred to as "Remaining Life" (RL). The estimated time, in years, that a reserve *Component* can be expected to continue to serve its intended function. Projects anticipated to occur in the initial year have "zero" *Remaining Useful Life*.

REPLACEMENT COST: The cost of replacing, repairing, or restoring a reserve Component to its original

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 72 of 73 RESERVE BALANCE: Actual or projected funds as of a particular point in time that the Association has identified for use to defray the future repair or replacement of those major *Components* which the Association is obligated to maintain. Also known as reserves, reserve accounts, or cash reserves. Based upon information provided and not audited.

RESERVE PROVIDER: An individual that prepares Reserve Studies.

RESERVE STUDY: A budget planning tool which identifies the current status of the reserve fund and a stable and equitable *Funding Plan* to offset the anticipated future major common area expenditures. The *Reserve Study* consists of two parts: the *Physical Analysis* and the *Financial Analysis*.

RESPONSIBLE CHARGE: A reserve specialist in *Responsible Charge* of a *Reserve Study* shall render regular and effective supervision to those individuals performing services which directly and materially affect the quality and competence rendered by the reserve specialist. A reserve specialist shall maintain such records as are reasonably necessary to establish that the reserve specialist exercised regular and effective supervision of a *Reserve Study* of which he was in *Responsible Charge*. A reserve specialist engaged in any of the following acts or practices shall be deemed not to have rendered the regular and effective supervision required herein:

■ The regular and continuous absence from principal office premises from which professional services are rendered, except for performance of field work or presence in a field office maintained exclusively for a specific project;

The failure to personally inspect or review the work of subordinates where necessary and appropriate;

■ The rendering of a limited, cursory, or perfunctory review of plans or projects in lieu of an appropriate detailed review;

■ The failure to personally be available on a reasonable basis or with adequate advance notice for consultation and inspection where circumstances require personal availability.

SPECIAL ASSESSMENT: An assessment levied on the members of an association in addition to regular assessments. *Special Assessments* are often regulated by governing documents or local statutes.

SURPLUS: An actual or projected *Reserve Balance* greater than the *Fully Funded Balance*. The opposite would be a *Deficit*.

USEFUL LIFE (UL): Total *Useful Life* or depreciable life. The estimated time, in years, that a Reserve *Component* can be expected to serve its intended function if properly constructed in its present application or installation.
